

Thanks to
you...

...student organizations have taken on missions of hope at home and abroad.

In Columbus, Ohio State engineering students organized through Engineers for Community Service (ECOS) helped build and install wheelchair ramps in the homes of disabled residents. At the same time in Guatemala, the Humanitarian Engineering Scholars team ran a summer STEM education program for preschool children.

A \$3,000 gift can fund the operating expenses for vital organizations like ECOS or support a Humanitarian Engineering project.
